

WILLIAM G. LEWIS

Cloud Security & Zero Trust Architect | AWS Security | Identity | Network Protection

Montgomery, AL | william.glewis17@gmail.com | 334-652-2601 | [linkedin.com/in/williamlewis06](https://www.linkedin.com/in/williamlewis06) | github.com/aws-dev-wgl

PROFESSIONAL SUMMARY

Cloud Security and Zero Trust Architect with 7+ years of experience across identity, network protection, encryption, audit logging, vulnerability remediation, Infrastructure as Code, and observability in AWS platforms. Led Zero Trust and next-generation firewall hardening, maintained security compliance through platform upgrades with zero unplanned downtime, and delivered TLS modernization across production environments. Combines security architecture with hands-on cloud and platform engineering.

CORE TECHNICAL COMPETENCIES

Zero Trust & Network Security: Zero Trust Architecture, microsegmentation, AppGate SDP, Palo Alto NGFW, PAN-OS, firewall policy governance

AWS Security: IAM, WAF, GuardDuty, KMS, CloudTrail, VPC, Transit Gateway, AWS GovCloud

Security Controls: STIG, ACAS, CIS Benchmarks, SCAP, vulnerability remediation, TLS modernization

Compliance: NIST 800-53, DoD RMF, ATO, IATT, ConMon, POA&M, eMASS, IRP, VMP, CMP, SAR

Security Observability: OpenSearch, Fluent Bit, Lambda SIEM pipelines, CloudWatch, OpenSearch Dashboards

Automation & Delivery: Terraform, CloudFormation, Ansible, GitLab CI/CD, Jenkins, Docker, Python, PowerShell, Bash

SELECTED CLOUD SECURITY IMPACT

- **AppGate Zero Trust Deployment:** Led AppGate Controller, Portal, and Gateway deployment and hardening across TEST and PROD, configuring entitlement governance, CIS Benchmark controls, and SCAP-validated posture for mission-customer onboarding.
- **Palo Alto NGFW Governance:** Governed licensing, PAN-OS upgrades from 10.2.8 to 11.0.3, patching, and policy hardening across TEST and PROD while maintaining security compliance with zero unplanned downtime.
- **Security Control Evidence:** Directed IATT execution and authored the ATO documentation suite while closing POA&Ms across ACAS, STIG, and AWS Foundations controls to deliver a compliant RMF package.

PROFESSIONAL EXPERIENCE

Lead Cloud & Platform Engineer, IL6 Technical Lead (Platform & Security Architecture) | SAIC / Oteemo, CNAP Program, Gunter AFB | Nov 2023 - Present

AWS GovCloud (IL4/IL5/IL6), AppGate SDP, Palo Alto NGFW (PAN-OS), Terraform, GitLab CI/CD, OpenSearch, Fluent Bit, Ollama, NIST RMF

- Led AppGate Software-Defined Perimeter deployment and Zero Trust hardening across TEST and PROD, configuring entitlement governance, CIS Benchmark controls, and SCAP-validated posture; established the operational Zero Trust baseline for SAOC customer onboarding.
- Governed the Palo Alto NGFW lifecycle, including licensing, PAN-OS version upgrades (10.2.8 to 11.0.3), patching, and policy hardening across TEST and PROD simultaneously, maintaining security compliance with zero unplanned downtime.
- Directed IATT Test Plan execution across five sprint cycles, coordinating with ISSM and SCA-R, authoring the full ATO documentation suite (IRP, ConMon, VMP, CMP, SAR), and closing POA&Ms across ACAS, STIG, and AWS Foundations to deliver a compliant RMF package.
- Designed and owned the program's classified SIEM pipeline from zero (Fluent Bit to OpenSearch) with IAM-based authentication, index architecture, and operational dashboards, delivering the team's first end-to-end log visibility.
- Served as primary technical owner of the CNAP IL6 platform, directing engineering across Zero Trust networking, NGFW operations, CI/CD automation, SIEM observability, and ATO compliance from initial IATT through production hardening and customer onboarding.
- Containerized and delivered hardened application stacks with Docker and Amazon ECR into the air-gapped IL6 environment in compliance with STIG and CIS Benchmark controls.
- Architected a high-side CI/CD pipeline for diode-constrained Infrastructure as Code delivery, engineering a versioned S3 cross-domain staging workflow that solved a classified automation problem with no off-the-shelf solution.
- Standardized Terraform Infrastructure as Code across the classified stack through per-component deployment scripts with CIDR enforcement and environment-variable injection, reducing estimated deployment errors by 60-70% and eliminating manual provisioning overhead.
- Established the IL4/IL5 customer onboarding framework: assessed process gaps, created the onboarding epic, and delivered a repeatable architecture enabling mission-customer expansion on the CNAP platform.
- Pioneered the program's first AI-enabled security operations capability: deployed a local LLM inference platform in a classified, air-gapped environment, enabling natural-language investigation against live security log data, a capability with no prior program equivalent.

Senior AWS Cloud Consultant | Baker Tilly | Dec 2021 - Jun 2023

AWS Commercial, Terraform, CloudWatch, Docker, RDS, Multi-Region Migration

- Led a multi-region cloud migration from Rackspace to AWS using modular Terraform stacks, standardizing provisioning patterns and reducing manual configuration overhead across customer environments.
- Built cross-account RDS backup automation and Docker image pipelines for ARM and x86, improving data resilience and standardizing secure CI/CD delivery.
- Designed proactive monitoring through CloudWatch Canaries and Amazon SNS-to-Microsoft Teams integration, reducing mean time to detection for infrastructure incidents.

Senior Cloud Engineer | SAIC | Aug 2020 - Dec 2023

AWS, CloudFormation, Ansible, Jenkins, Git, PowerShell, CloudWatch, Elastic Beanstalk, EC2, ACAS, F5, Solaris 10

- Drove Tier 2 and Tier 3 support triage by monitoring and troubleshooting problems, implementing scheduled and emergency patches, running ACAS scans, and executing engineering plans for application- and platform-level updates.
- Deployed Infrastructure as Code changes across 24 AWS accounts and DEV/TEST/PROD environments using CloudFormation and Ansible, with Git for version control and Jenkins for continuous integration and delivery.
- Developed an automated Active Directory user report for key government stakeholders using Jenkins, PowerShell, and Ansible.
- Automated application availability validation using PowerShell, Ansible, and Jenkins, supporting a 99.99999% system uptime service-level agreement.
- Created a CloudWatch uptime-monitoring dashboard for Elastic Beanstalk and EC2 performance, improving resource visibility and response times.
- Led the TLS 1.0-to-1.2 transition across DEV/TEST/PROD environments, remediating F5 firewall findings and maintaining DoD cybersecurity compliance.
- Administered patching and quality analysis for Solaris 10 systems through a complex multi-step procedure, maintaining compliance and availability for mission-critical ESB legacy systems.

RHEL Cloud System Administrator | Direct Viz Solutions | Oct 2019 - Feb 2020

Red Hat Enterprise Linux, Cloud Infrastructure, Middleware, OS Patching, Performance Monitoring

- Managed cloud infrastructure services, applying middleware and operating-system updates while identifying and resolving performance inefficiencies.
- Developed, configured, and supported cloud platforms and infrastructure for optimal performance and reliability.

Cloud System Integrator | Leidos | Jun 2018 - Oct 2019

Cloud Migration, Configuration Management Database, SSL/TLS Monitoring, Application Support, 24/7 Operations

- Collaborated with technical leads to support application migrations and provided 24/7 operational support to maintain customer service and system availability.
- Built a Configuration Management Database to track resources, reduce downtime, and improve patching efficiency.
- Developed a system to monitor expiring SSL certificates, maintaining continuous compliance and supporting a 99.99999% availability service-level agreement.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate (2022)
- AWS Certified SysOps Administrator - Associate (2023)
- CompTIA Security+ CE (active), DoD 8140/8570 IAT Level II compliant
- AWS Certified AI Practitioner (in progress)

EDUCATION

Bachelor of Science in Computer Science: Alabama State University, Cum Laude | Graduated Dec 2018

TECHNICAL DOCUMENTATION & PUBLICATIONS

- Authored documentation defining Infrastructure as Code deployment best practices for GitHub, environment-redeployment procedures, and branching strategies for Infrastructure as Code environments.
- Published articles on cloud infrastructure management and optimization techniques.
